

WINE BOTTLE GROMMET

The Kessick Wine Bottle Grommet is designed to fit into a specifically cut hole in any $\frac{3}{4}$ " wood panel or substrate for the purpose of securely storing and displaying 750 ml wine shaped bottles.

Applications Include:

professional
design of
unique wine
storage and
display

slide-out
and fixed
shelves for
cabinetry

integration
into retail
store fixture
displays

DIY wine
storage and
display for
residential

The proprietary and exclusive design features of the Patent Pending wine grommet are based on our two-step manufacturing process. A rigid body in the unique shape of a 750ml wine bottle is bonded to a soft silicone rubber top flange that grips and cushions the wine bottle.

The Kessick Wine Bottle Grommet can be installed in a wide variety of orientations, including neck-out, label-forward and display row, limited only by the cut-out hole in the $\frac{3}{4}$ " substrate.

Cut-out can be done using CNC router, hand router with guide or hand cut using drill and jigsaw. See the cut-out requirements on back for dimensional requirements and specifications.
